

NGUI v3 made significant breaking changes for several event types, especially with regards to UISliders and Progressbars.

To capture the events listed below, you will need to do the following steps:

- On the NGUI object with the “NguiEventForwarder” component
 - In the section for the specified event (for example, on a Slider to capture the “OnValueChanged”), drag your NGUI object to the Notify box.
 - The Notify box will update and a new option, “Method”, will appear. Select the appropriate method from the “NguiEventForwarder” class
 - Example:

NOTE: If you do not set the Notify method, the events listed below will NOT be captured.

OnSubmit

OnValueChanged (previously called OnSliderChange)

OnSelectionChange

OnScrollBarChange

OnDragFinished
